## Compact differential pressure switch Models DC, DCC

## (凪

## Applications

- Differential pressure monitoring and control of processes
- Safety-critical applications in general process instrumentation, especially in the chemical and petrochemical industries, oil and gas industries, power generation incl. nuclear power plants, water/wastewater industries, mining
■ For gaseous, liquid and aggressive media, also in aggressive ambience
- Filter and level monitoring

## Special features

- No power supply needed for switching of electrical loads
- Robust switch enclosure from aluminium alloy or stainless steel 316L, IP66, NEMA 4X
- Setting ranges from 0 ... 160 mbar to $0 \ldots 40$ bar with high static and high one-sided pressure up to 250 bar
- Intrinsic safety Ex ia available
- 1 set point, SPDT or DPDT, high switching power up to AC $250 \mathrm{~V}, 15 \mathrm{~A}$

## Description

These high-quality differential pressure switches have been developed especially for safety-critical applications. The high quality of the products and manufacturing in accordance with ISO 9001 ensure reliable monitoring of your plant. In production, the switches are traced by quality assurance software at every step and subsequently are $100 \%$ tested.

In order to ensure as flexible operation as possible, the differential pressure switches are fitted with micro switches, which enable the switching of an electrical load of up to AC $250 \mathrm{~V}, 15$ A directly.

For lower switching power ratings, such as for PLC applications, argon gas-filled micro switches with gold-plated contacts can be selected as an option.

## Process Compact Series

Differential pressure switch, model DC

All wetted materials are from stainless steel as a standard. For applications with special requirements on the wetted parts, a version with Mone ${ }^{\circledR}$ is available.

By using a diaphragm measuring system, the model DC differential pressure switch is extremely robust and guarantees optimal operating characteristics and the highest measuring performances, with repeatability lower than $1 \%$ of span.

The process connection with a centre distance of 54 mm lower mount allows an easy and comfortable mounting of a standard valve manifold.

## Standard version

## Measuring system

Double diaphragm with transmission shaft, without sealing elements

## Switch enclosure

■ Aluminium alloy, copper-free, epoxy resin coated

- Stainless steel 316L (only available for model DC)

Tamper-proof
Laser-engraved product label from stainless steel

## Ingress protection

IP66 per EN/IEC 60529, NEMA 4X

## Permissible temperature

| Ambient | $\mathrm{T}_{\text {amb }}:$ | $-30 \ldots+85^{\circ} \mathrm{C}$ |
| :--- | :--- | :--- |
| Medium | $\mathrm{T}_{\mathrm{M}}:$ | $-30 \ldots+85^{\circ} \mathrm{C}$ |

## Switch contact

Micro switches with fixed dead band

- $1 \times$ SPDT (single pole double throw)
- $1 \times$ DPDT (double pole double throw)

The DPDT function is realised with 2 simultaneously triggering SPDT micro switches within $2 \%$ of the span.

| Contact version | Electrical rating (resistive load) |  |  | Suitable for <br> Exia option |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | AC | DC |  |
| A | $1 \times$ SPDT, silver | $250 \mathrm{~V}, 15 \mathrm{~A}$ | $24 \mathrm{~V}, 2 \mathrm{~A}, 125 \mathrm{~V}, 0.5 \mathrm{~A}, 220 \mathrm{~V}, 0.25 \mathrm{~A}$ | No |
| B | $1 \times$ SPDT, silver, hermetically sealed, argon gas filling ${ }^{2)}$ | $250 \mathrm{~V}, 15 \mathrm{~A}$ | $24 \mathrm{~V}, 2 \mathrm{~A}, 220 \mathrm{~V}, 0.5 \mathrm{~A}$ | Yes |
| C | $1 \times$ SPDT, gold-plated, hermetically sealed, argon gas filling $\left.{ }^{2}\right)$ | $125 \mathrm{~V}, 1 \mathrm{~A}$ | $24 \mathrm{~V}, 0.5 \mathrm{~A}$ | Yes |
| G | $1 \times$ DPDT, silver | $250 \mathrm{~V}, 1 \mathrm{~A}$ | $24 \mathrm{~V}, 0.5 \mathrm{~A}$ | No |

2) Permissible ambient temperature range: $-30 \ldots+70^{\circ} \mathrm{C}$

## Set point adjustment

The set point can be specified by the customer or factory-set within the setting range. Subsequent adjustment of the set point on site is made using the adjustment screw, which is covered by the access cover plate with lead seal option.

## Repeatability of the set point

$\leq 1 \%$ of span

## Please specify:

Set point, switching direction for the contact, e.g.:
Set point: 5 bar, rising
For optimal performance we suggest to adjust the set point between 25 ... $75 \%$ of the setting range.

## Example

Setting range: 0 ... 10 bar with one switch contact
Repeatability: $1 \%$ of $10 \mathrm{bar}=0.1$ bar
Dead band: (see table setting ranges)
2 x repeatability + dead band $=2 \times 0.1$ bar +0.3 bar $=0.5$ bar
Rising pressure: Adjust set point between 0.5 ... 10 bar.
Falling pressure: Adjust set point between 0 ... 9.5 bar.

## Ignition protection type (option)

- Ex ia I Ma (mines), only available for model DC with stainless steel switch enclosure
- Ex ia IIC T6/T4 ${ }^{\text {1) }} \mathrm{Ga}$ (gas)
- Ex ia IIIC T85/T135 ${ }^{\text {1) }} \mathrm{Da}$ (dust)

1) The temperature class is related to the ambient temperature range. See the type examination certificate for further details.

## Safety-related maximum values

(only for optional Ex ia versions)

| Maximum values |  |
| :--- | :--- |
| Voltage $\mathbf{U}_{\mathbf{i}}$ | DC 30 V |
| Current $\mathbf{I}_{\mathbf{i}}$ | 100 mA |
| Power $\mathbf{P}_{\mathbf{i}}$ | 0.75 W |
| Internal capacitance $\mathbf{C}_{\mathbf{i}}$ | $0 \mu \mathrm{~F}$ |
| Internal inductance $\mathbf{L}_{\mathbf{i}}$ | 0 mH |

## Process connection

Stainless steel, lower mount (LM)
■ $1 / 4$ NPT female (standard)

- $1 / 2$ NPT, G $1 / 2$ A, G $1 / 4$ A male via adapter
- $1 / 2$ NPT, G $1 / 4$ female via adapter

■ M20 x 1.5 male via adapter

## Electrical connection

- $1 / 2$ NPT female (standard)
- $3 / 4$ NPT, M20 x $1.5, G 1 / 2, G 3 / 4$ female
- Cable gland non-armoured, nickel-plated brass
- Cable gland non-armoured, stainless steel (AISI 304)
- Cable gland armoured, nickel-plated brass
- Cable gland armoured, stainless steel (AISI 304)
- MIL connector, 7-pin, DTL 5015

For cable connections to the internal terminal block use wire cross-sections between $0.5 \ldots 2.5 \mathrm{~mm}^{2}$.
For the grounding cable connection to the protective conductor screws use max. $2.5 \mathrm{~mm}^{2}$ for the internal screw and max. $4 \mathrm{~mm}^{2}$ for the external screw.
